

Certified Banking ISO Training Program

▶ Certification

The role of Information Security Officer (ISO) has quickly matured into a role of primary importance in the survival of financial institutions.

With intensifying regulatory requirements and the constant increase in the number of cyberattacks on customer information, a heavy burden has fallen on the shoulders of the ISO and they need to be prepared for the challenge.

To meet this need, 10-D Security has developed the Certified Banking ISO Training program. The two-part certification program is the only offering of this type in the industry. It teaches the breadth of skills required of the ISO, regardless of experience, and will equip you with the specific knowledge to secure your institution.

This program consists of two courses: **Essential ISO Training** and **Advanced ISO Training**. Each includes two (2) days of classroom instruction, consisting of course material, lectures, demonstrations, and hands-on lab work.

The **Essential ISO Training Course** curriculum is specifically designed for both new ISOs and those with experience that are looking to establish a baseline of knowledge, to help them successfully navigate this critical role.

The objective of the **Advanced ISO Training Course** is to provide the knowledge and skills needed to build an Information Security culture and harden your Information Security program.

Attendees that successfully complete both courses will be awarded a Certified Banking ISO certificate.

10-D Academy

▶ The Difference

- Courses are taught by former Information Security Officers experienced in the banking industry.
- 10-D Academy has the experience and expertise to train participants to perform the ISO role in their specific institution.
- We bring a real-world perspective that grabs the attention of attendees and provides them with knowledge they will retain and can apply to keep themselves and their bank safe and secure.

▶ Attendees

While the ISO Certification program is designed to provide a comprehensive breadth of skills for Information Security Officers, this same knowledge base is beneficial to many individuals in today's banking environment:

Information Security Officers

- New to the role or a seasoned ISO, you will take away valuable information from these courses.
- ISO support staff will benefit from this in-depth knowledge base.

IT Administration and support staff

- From the CIO to Network Engineer, understanding the inner workings of the ISO duties and role will help the bank improve their security culture.
- A better prepared and forward thinking IT Department will result from training and will improve Information Security support and buy-in.

Management

Those bank officers are fortunate to have the ISO in their reporting chain will greatly benefit by understanding what the ISO role is and is not.

Risk, Compliance and Audit Professionals

These areas will be better equipped at the next examination, given a solid understanding of regulatory expectations relating to Information Security, as well as the practical application of guidance-driven requirements.

▶ Essential ISO Course

This Essential ISO Training Course curriculum was specifically designed to help both new ISOs and those who would like to establish a baseline of knowledge to help them successfully navigate this critical role.

The objective of the Essential ISO Training Course is to provide the critical knowledge and skills needed to competently perform as an ISO in today's financial world.

This class consists of course material, lectures, demonstrations, and hands-on lab work. A certificate of completion will be issued to those attending the full two (2) day course.

▶ Advanced ISO Course

The Advanced ISO Training Course curriculum takes an in-depth look at specific areas including areas of regulatory focus and where institutions often struggle.

A general understanding of banking and information security and continuity programs is a plus, but not a requirement for this course.

This course will explore some complex topics and provide advanced insight in the functionality of the ISO role.

This is a full two (2) day course, and includes lectures, demonstrations, and hands-on lab work.
